

# Eray Balat

Creative Engineer — Generative Video Systems

eray@eraybalat.com · eraybalat.com · github.com/eraybalatt · linkedin.com/in/eraybalat  
Kayseri, Türkiye · UTC+3 · Remote · Registered studio, invoicing internationally  
Turkish (native) · English (professional working) · German (limited) · Arabic (elementary)

I make things, and then I build the systems that make more of them.

I write, cut, grade and score films. I cut *Boomerang*, which took an Honorable Mention from Robert F. Kennedy Human Rights. I compose my own scores. I tool leather by hand in Anatolian and Seljuk motifs. That is the half of me that decides whether a frame is any good.

The other half builds the pipelines: prompt orchestration layers, multi-model routing, finishing chains. I run generative models at production volume for Universal Music Türkiye, for US and EU clients, and for my own studio. **Knowing where a model breaks is most of that work. Knowing when the output is still wrong is the rest.**

## SYSTEMS I'VE BUILT

### DreamScene — one sentence in, one film out

2026

Built live at the Generative Media Hackathon, Istanbul  
A single sentence in any language enters an LLM orchestration layer that expands it into a ~200-word multi-shot cinematic prompt — camera direction, lighting, audio design — then routes to a video model for a 1080p render with synced audio in two to three minutes.

- **Multi-model routing** across Seedance 2.0, Kling 3.0 and Runway Gen-4, with automatic style detection
- **Render queue with live polling**, style presets, duration and audio controls
- Built in **24 hours** with a working front-end — a prototype, but the pattern holds

### Four-layer AI ad system

2025

For a US direct-response agency  
A single asset set recuts into multiple test variants without regenerating anything; identity stays locked across the set.

### Anti "AI-tell" finishing chain

Ongoing

Upscale, restore, regrade and grain pass that makes generated footage read as filmed — the difference between output that ships to a label and output that gets sent back.

### Studio automation over MCP

Ongoing

Claude connected via MCP to my project, asset and delivery tooling, plus n8n for scheduled jobs — briefing, generation and hand-off run as one flow.

## MODELS, HANDS-ON IN PRODUCTION

|                |                                                                    |
|----------------|--------------------------------------------------------------------|
| VIDEO          | Veo · Kling · Runway · Seedance · Higgsfield                       |
| IMAGE          | Nano Banana · Firefly · Midjourney                                 |
| FINISHING      | Topaz · Magnific                                                   |
| AUDIO & AVATAR | ElevenLabs · Suno · HeyGen · Hedra · Sync                          |
| POST           | Premiere Pro · After Effects · DaVinci Resolve · Photoshop         |
| WORKFLOW       | MCP · n8n · modular prompt frameworks · batch identity consistency |

*I have delivered commercial work under hard single-model constraints — including a Universal Music Türkiye release produced entirely within one model family. Knowing what a model cannot do is most of the job.*

WORK

Founder & Creative Producer — Citrine Studio

Apr 2025 — present

Independent studio · remote · US & EU clients

- Directed two AI music videos for **Universal Music Türkiye** (Modd — Real Life, Yok Uyku)
- Full product campaign in **72 hours**: three films, six product films, two identity-locked synthetic characters, original score
- Multilingual ad versions with lip-synced voice-over for cross-market delivery
- **100% Job Success** across nine contracts on Upwork; all scoping and delivery in English

AI Video Producer & Motion Designer — Balp Dijital

Jun 2024 — Feb 2026

Advertising agency · Kayseri

- Introduced generative AI into the agency's production pipeline, cutting turnaround on campaign assets

Ambassador — Suno

2025

AI music platform

- Ran a dedicated channel (@eray.suno) producing daily short-form work around AI-generated music
- 5,500+ tracks composed; original scores for my own films and for independent creators

THE OTHER HALF — FILM, SCORE, CRAFT

Boomerang — editor

2026

Honorable Mention, Robert F. Kennedy Human Rights Student Video Contest. Official selection, international film festival. Written and directed by a friend; I cut and finished the film.

FLAWLESS — director, editor

In post

Feature documentary on the Antwerp Diamond Heist, built around an original filmed interview with Leonardo Notarbartolo.

Writing, acting & leather

Wrote, directed and acted in Die Post, my first short — a Turkish–German friendship story shot in Turkish with German subtitles. Wrote and acted in Run or Run. Three student films, twenty festival entries. Away from the screen I hand-tool leather in Anatolian and Seljuk motifs — the one thing I make that no model can generate.

Felsefehanem — volunteer producer

2025 — present

Unpaid philosophy video for students preparing for the national university entrance exam. Private exam prep in Türkiye is expensive; good material should not depend on affording it.

EDUCATION

BA, Radio, Television & Cinema

2024 — 2028

Erciyes University, Faculty of Communication — Kayseri

Self-taught in editing, motion design, grading, sound design and AI production. Earlier: Kotlin, and an ethical hacking course at fifteen — where the systems half started.
